## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-8 and 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heitman et al (US 5,102,031).

Heitman et al disclose a method for brazing by applying alternating current across a workpiece to resistively heat a pre-placed filler metal to a temperature sufficient to melt the filler metal, wherein the material for the workpiece is nickel alloy and the filler is copper (col. 2, line 51 – col. 3, line 52) (col. 7, lines 5-19).

Art Unit: 1725

Heitman et al fail to teach a discontinuity on the workpiece and wherein current applied is less than 5000 amps and less than 5 volts.

However, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to braze on a workpiece with a discontinuity, since braze is either used in repairing the workpiece or joining workpieces. In addition, the current and voltage being less than 5000 amps and 5 volts, respectively, would have been obvious, since a sufficient current and voltage are needed to melt the filler material.

***Allowable Subject Matter***

4. Claims 9-10 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior arts of record fail to teach residence time between 3 and 10 seconds.
